What's New at Bering Yachts

Bering 65 and Bering 80 under construction

The Bering 65 and Bering 80's steel work has now been completed and both boats are currently undergoing outfitting.

Bering 65 is the second production hull of this model made to fit the needs of an experienced ocean crossing voyager. The B 65 has 100 tons displacement, and a 20 foot beam, and it feels more like a 75-80 foot boat due to the vast space it offers. The luxury interiors in combination with top end outfitting give you the feeling that you are on board a superyacht.

Bering 80 with a displacement of 212 tons is a superyacht with superior explorer capabilities. Ideal for long voyages, the Bering 80 boasts an impressive range of 6000 nautical miles at 8-10 knots, with her tanks holding 10,000 gallons of fuel. Both yachts offer the option for Hybrid Propulsion using the ReGenNautic electric hybrid system. Bering 65 is scheduled to be launched in January 2015 and Bering 80 in May 2015.

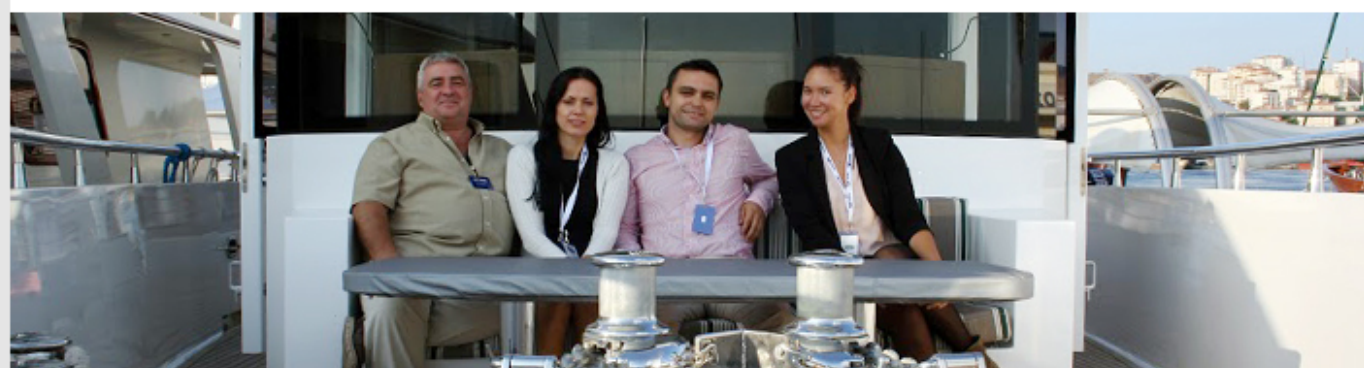

Bering 70 Construction in Progress

Bering Yachts is working on the construction of the new Bering 70 - luxury motor yacht at Bering's new shipyard in Turkey. Our new facility of 5000 m2 is equipped with wood, mechanical, stainless steel and paint-varnish workshops. The yard is located in Antalya's Free Economic Zone.

Bering 70 is a new and exciting direction for Bering Yachts. The striking unique design is done by Scott Blee and Sabdes YACHT Design. This is the first yacht among Bering yachts which is available in semi-displacement hull capable of reaching 18 knots. Bering 70's design allows it to present smooth and comfortable motion even in the roughest conditions. The very efficient and easily driven hull form utilizes low power engines to give excellent fuel economy. To aid in the comfort for extended cruises or the live-aboard passengers, space on board is smartly used to make the vessel feel larger than it is. Finally, Bering 70 can be configured with a Hybrid Propulsion system.

Bering Yachts at Istanbul Boat Show

Bering Yachts first attendance of Istanbul Boat Show was a surprise for both visitors and exhibitors.

The stunning B 60 DZAM, full displacement luxury steel yacht, was a key attraction at the seven-day event and formed a central feature of the Eurasian boat show. With three new models coming to market during 2014, Bering 70, Bering 80 and Bering 77, customers were keen to acknowledge the expansion of the American expedition yacht manufacturer in both European and Asian markets.
